```

Calendar/Schedule Storage Function

A built-in 199-year calendar lets you simply enter a date to recall the calendar for the entire month onto the display. Recall any month all the way up to the year 2099! Holidays, anniversaries, birthdays or other important dates can be marked for display in reverse field. You can even store your own personal daily appointments anywhere within the 199-year range of the calendar! Simply enter a time and description, and your appointments are automatically stored and displayed in chronological order!

Full-month CALENDAR display (with schedule register symbol)

When data is stored for the AM of Wednesday, November 4, and the PM of Thursday, November 12, here's how it looks:

```

TEL Telephone Directory

Index display

• A Telephone Directory lets you store names, telephone numbers and addresses.

Each item can contain up to 384 characters. An indexed display shows each entry arranged according to the alphabetical sequence of the names. Finding specific data items is made easy by direct search, random search and combined search.

```

SCHEDULE Schedule Keeper

• A Timetable Display that outlines the day's activities.

The Schedule Keeper function stores appointment times and details. A Schedule Timetable provides an overview of appointments at a glance.

■ Schedule Alarm

The new Schedule Alarm function of the Digital Diary acts as a handy reminder for appointments. Schedule alarms can be set for each appointment, independent of the appointment time. This means that an alarm can be set for a few minutes before the appointed time as a handy reminder that it's time to get ready.

Home time / World time

● A Timepiece function that provides valuable assistance for time and data management.

The World time function tells what time it is at any one of 127 cities in 24 different time zones around the globe. Any of the time zones can be specified as the home time. This makes the Digital Diary an important tool for the international business person, as well as anyone else to whom multi-zone timekeeping is important. The Home time also features a daily alarm.

Home time display

Key identification chart

The keyboard illustrated below shows all of the characters that can be entered from the keyboard of the SF-7000/7500/8000.

Each key is capable of entering four characters. Characters are entered by pressing a key directly, or by using the [SHIFT] and [CODE] keys. The following illustration shows how the [SHIFT] and [CODE] key operations are related to the four characters that can be entered with each key.

	Y	À
	y	à

Normal   [CODE]

[SHIFT]   [CODE] + [SHIFT]

Example:
- [Y] enters y
- [SHIFT] [Y] enters Y
- [CODE] [Y] enters à
- [SHIFT] [CODE] [Y] enters À

Data Communications

The SF-7000, SF-7500, and SF-8000 can be connected to each other, or they can be connected to a personal computer for direct data communications.

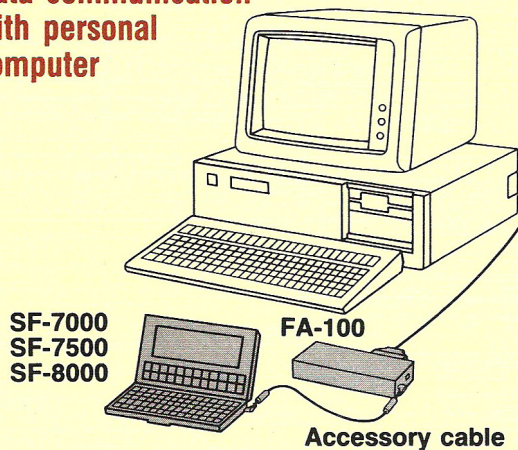

Interface Unit for Digital Diary
*Brings the Digital Diary into the Realm of Data Communications!*

FA-100

- Enables data communications with a personal computer.
- Allows connections with printer.
- Popular software program data can be transferred to the SF-7500.
- Comes with communication software utilities.
